

HIFI EXCLUSIVE FLOORSTANDING SPEAKER

DARC 60  
by  
Gauder Akustik

# Gauder bridges the gap

In the world of hi-fi, innovations usually emerge with baby steps. However, with their DARC series, Gauder has launched a leap forward in innovation.

*Michael Lang*

Since the test of the DARC 100 about a year ago (test in STEREO Magazine 16), the sound of this exceptional loudspeaker has not gone out of my head. Its musical maturity and the unobtrusive yet all the more convincing reproduction of music were simply impossible to forget.

## No longer out of reach

Due to its smaller brother 60, the entry ticket to the world of DARC technology is now considerably cheaper. By the way, the abbreviation stands for "Dynamic Aluminum Rib Construction" and is meant to hint at that the special cabinet construction. In addition to the wealth of other design measures, this technology gives all models in the series excellent dynamic capabilities despite their comparatively compact dimensions. Many of the refined technical details found in the DARC 60 we already admired in the 100. The cabinet has the same width and depth, but was shrunk by 21 centimeters in height. One woofer as well as seven kilograms of weight have been left behind. From a technical perspective, the 60 is a 2 1/2 way speaker, in which one woofer works inside a sealed cabinet, while its bigger sibling works on a bass reflex port underneath it. Both bass drivers have an aluminum diaphragm that combines high stiffness with low weight. The tweeter comes from Accuton's ceramics

department. For a surcharge of 8000 Euro per pair, the ceramic version can be switched for a diamond tweeter at any time.

One of Gauder's most important features is the strict selection of all drivers to an accuracy of 0.5 dB, which sets them positively apart from the majority, as selection costs time as well as money.

Also the other ingredients of the entirely handmade in Swabia, Germany speakers are impressive: NextGen banana sockets from WBT, Mundorf coils and capacitors for the mid/high range and Clearwater silver cables for the internal wiring, as well as the symmetrical crossover technology with 60 dB slope, which Gauder regards as essential for the relaxed and homogeneous reproduction. The possibility of adjusting bass and treble in three stages by means of a plug-in contacts as well as, concealed on the underside, another option called "Bass Extension", are also great features. Latter extends the low bass range but also demands a significantly higher current delivery from the amplifier. We decided against the low bass extension in favor of a crisper, faster, more dynamic sound image and a better transparency down to the mid frequency range. If you want to improve the sound of the DARC 60, you should rather consider the "Double Vision" edition, which is now available and offers even better crossover components and terminals.

**Downsizing in price with almost the same technology**

## TEST DEVICES

### Turntable:

Transrotor Rondino;  
Music Hall MMF9.3;  
Pro-Ject ATR  
Celebration 40  
Super Pack 1

### Phono preamplifier:

Pro-Ject Tube  
Box DS2

### Integrated amplifier:

Audia Flight FLS 10;  
Audionet SAM  
Loudspeaker:  
DALI Epicon 6

### Cable:

Audioquest; INAK

Noble WBT sockets and terminals for bass and treble adjustment.

### Spectacularly inconspicuous

Look at the DARC for a while, you'll notice that you've probably never before been so unobtrusively overwhelmed with musically significant details. The loudspeaker plays incredibly gently, distortion-free, neutrally and three-dimensionally in all frequency ranges that it an utter a pleasure to catch yourself again and again turning the volume control a little further to the right, although already at moderate levels it created a full and pleasant sound image in the room. With Roger Waters' "Radio KAOS", for example, the DARC seemed to have entirely disappeared acoustically. Only the seemingly out of nowhere coming sound waves remain.

When Martha Argerich, just 27 years old in 1968, played Chopin's Piano Concerto No. 1 under the reign of Claudio Abbado, the initial transverse flutes, clarinets and oboes where graceful, while the tension and drama inherent to this piece where immensely convincing with the Gauder. Argerich was enabled to unleash her art – this unique mix of technical competence and sheer exuberant feeling – without any constrains. A pleasure!

A leap to Kraftwerk from Düsseldorf, Germany: in the classic "Autobahn" the low synth tones merge into a perfect unity with the melody, they carry and support it, with nothing being hidden or smeared. This ability to always make the right decision in service of the music is an outstanding quality of this loudspeaker and makes the price appear absolutely appropriate. ■

#### INFO

The cabinet of the DARC series is constructed layer by layer from these aluminum arcs.

## Gauder Akustik DARC 60

**Price:** from 20000 € (Surcharge diamond tweeter: 8000 €; various cabinet designs available; large base plate plus 4000 €; Double Vision version plus 4000 €)

**Dimensions:** 26 x 42 cm (WxHxD)

**Warranty:** 10 years

**Contact:** Gauder Akustik  
Phone: +49 (0)7159-920161  
www.gauderakustik.com

The entry into the world of DARC technology is a perfect hit – in terms of sound as well as workmanship. The DARC 60's 2.5-way bass reflex system invites you into the music just as magically as its big brother, the DARC 100, but at a far more moderate price.

### Measurement results

DC resistor	8 Ohm
Minimum impedance	5 Ohm at 140 Hz
Maximum impedance	12 Ohm at 63 Hz
Sound pressure level (2,83 V/m)	87 dB SPL
Power for 94 dB SPL	5,4 W
Lower cut-off frequency (-3dB SPL)	29 Hz
Distortion factor at 63/3k/10k Hz	0,3/0,1/0,1 %

#### Lab Comment

Frequency response somewhat unsteady, but largely balanced. Very even dispersion, angulation hardly necessary. Extremely low distortion, still good step response; efficiency and impedance uncritical.
